7. Final Mount: Carefully center the sender on the adapter and press down firmly to secure the adhesive bond.

6. Prep the Sender: Remove the protective film from the adhesive tape located on the bottom of the STR1/STR2 sender unit.

5. Secure with Screws: Insert the 5 supplied screws. Tighten them in a cross-pattern to ensure even pressure, but do not over-tighten, as this can deform the seal.

4. Place adapter: Set the plastic adapter on top of the seal. Verify all 5 mounting holes are aligned across the adapter, the seal, and the tank surface.

3. Align the Indent: Rotate the rubber seal until the indent (A) on its outer edge is perfectly aligned with the recessed mounting point (B) on the plastic adapter.

2. Position the Seal: Place the rubber seal over the tank opening.

1. Clean and Dry: Thoroughly clean and dry the tank surface where the adapter will be mounted to ensure a proper seal.

⚠ IMPORTANT NOTE: This adapter is not meant to be used with tanks containing drinking water.
